

Start with one visible win.

The first-hour goal: the service-page shell and Motorized Shading 01-05, with actual copy and blank media.

1. Open the existing project

- ☐ Copy the build pack into **docs/v4-build/** in Cursor.
- ☐ Let Cursor inspect the current remote, local changes and installed packages. Continue in the project you opened. Keep local work.

2. Paste the first task

- ☐ Open **prompts/01-FIRST-HOUR.md** and paste the task. Attach the rail screenshots and motorized shade study.
- ☐ Build the desktop frame: **25% sticky left rail / 75% scrolling right field**. Let the document handle vertical scrolling.
- ☐ Implement Shading 01-05: hero, direct answer, light/privacy/view, system architecture and the solar study reservation.

3. Review and save

- ☐ Open the preview. Check rail proportions, mobile reading order, headline spacing and blank image ratios.
- ☐ Mark the completed Content and Layout cells in the spreadsheet. Media can remain Pending. Save this batch.

Use the next hour for Shading 06-10. Do not add another design platform or reopen the entire site plan.

Finish one page. Then reuse the shell.

Batch	Build	Visible finish
01-05	Opening and system study	Real text, room/media rectangles and useful system explanation
06-10	Selection and technical depth	Comparisons, tradeoffs, room examples and construction decisions
11-15	Proof, ownership and inquiry	Reserved proof, scope, handoff, FAQ, related links and form

Recommended page order

1. Motorized Shading
2. Architectural Lighting
3. Media & Audio
4. Home Intelligence
5. Private Cinemas
6. Digital Infrastructure & Privacy
7. Security Cameras & Access Control
8. Outdoor Entertainment

Reuse the frame and component mechanics. Keep each service's own flow.

Media & Audio keeps its dedicated speaker-family, speaker-count, TV, Atmos and Control4 chapters. Shading keeps its fabric, form, Lutron-family, power and installation guide.

What to read for the current page

Open its one hub file and its spreadsheet tab. The hub starts with fifteen section jobs and layout recommendations, then contains the detailed source copy. The section IDs are content references; they are not fifteen compulsory full-height screens.

Images later. Progress now.

Blank media is valid for build review. Use the intended ratio and stable slot ID so replacing the image does not rebuild the section.

Keep now

- ☐ Original DAVG logo, approved voice, Korta proportion and color direction.
- ☐ Schibsted Grotesk, Instrument Sans and selective IBM Plex Mono. Self-hosted fonts.
- ☐ 25/75 service-page frame and the complete service education in each master.

Back burner

Photo sourcing; final cutaways; study animation; remaining background words; advanced horizontal motion; bylines; city/spoke/resource expansion; CMS; Claude component reconciliation and old approval paperwork.

Before public release

- ☐ Production build and public routes work on the existing Cloudflare setup.
- ☐ Mobile navigation, tables, anchors, form delivery and failure/success feedback work.
- ☐ Public phone/email are consistent. Unsupported project, product, price and certification claims are removed or checked.
- ☐ Replace or hide unfinished public proof/media. Preview pages remain unindexed; the public sitemap covers the actual release routes.

One source mismatch to check

The older Dropbox tech file names `davg-korta-v4`. Last week's typography work is in draft PR #7 in `davg-ai`. The first Cursor task checks your open workspace. At deployment, confirm the repository and branch connected to Cloudflare. This does not delay page layout work.
